

Power Management

Use **Sleep Mode**, and **Auto-Off** to conserve electricity.

NOTE: Configuring longer times for these settings or turning off these features increases energy consumption.

- **Sleep Mode**

- Power usage is reduced while in Sleep mode.
- After initial setup of printer, the printer will enter Sleep mode after 5 minutes of inactivity.
- The Power button light is dimmed in Sleep mode.
- The time to Sleep mode cannot be changed.

- **Auto Off**

This feature turns the printer off after 2 hours of inactivity to help reduce energy use. Auto-Off turns the printer off completely, so you must use  (the Power button) to turn the printer back on. If your printer supports this energy saving feature, Auto-Off is automatically enabled or disabled depending on printer capabilities and connection options. Even when Auto-Off is disabled, the printer enters Sleep mode after 5 minutes of inactivity to help reduce energy use.

- Auto-Off is enabled when the printer is turned on, if the printer does not have network or, fax capabilities, or is not using these capabilities.
- Auto-Off is disabled when a printer's wireless or Wi-Fi Direct capability is turned on or when a printer with fax, USB, or Ethernet network capability establishes a fax, USB, or Ethernet network connection.

TIP: To conserve battery power, you can enable Auto-Off, even when the printer is connected or wireless is turned on.
